Enterprise Search is the powerful search engine for your website or social intranet. Thanks to the innovative indexing techniques of Enterprise Search, you can find the information you are looking for super-fast. Smart search aids such as autosuggest, autocomplete, intended-u, highlighting and a clear distinction between web pages and documents are supporting to this.

Autosuggest and Autocomplete

Enterprise Search supports you in applying the right search terms. As you type, you will get the most important search results in a clear menu (image). If you make a typing error, the intended options are shown with the associated results.

One click on the search result will immediately lead you to the right page.

Enterprise Search is standard software from Seneca and can be deployed quickly for searching your own and external sources of information. For example, search the website, the job site and an external subsite simultaneously with one search query. The results are presented distinctively on your own website and in your own design.

Search efficiently, find quickly
